Kumal Patel

CSE 310 Assignment #8
(Max. Points: 30)

Due on: Friday, Dec. 6, 2019, 11:59pm Arizona time

General Instructions:

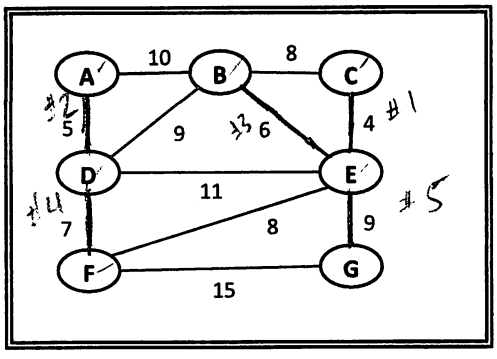
- For all written exercises: **your answer should be clearly typed or written and must be saved in .pdf or .jpg format**. Note: **unreadable answer receives no credits!**
- All assignments must be submitted through the link posted on Blackboard, we do NOT accept any hand-in submissions or submissions sent through emails!
- Submission link will be closed automatically once the due date/time is past and **no late assignment will be accepted**.
- You will be allowed 3 times to submit the assignment before the due date/time, but we will only grade your last submission.

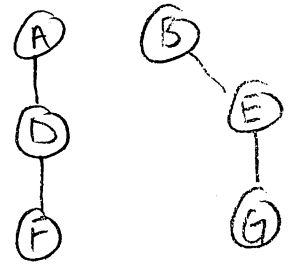
Objectives

- Kruskal's MST algorithm.
- Prim's MST algorithm.
- Dijkstra's Shortest Path Algorithm
- Longest Common Subsequence problem

Questions

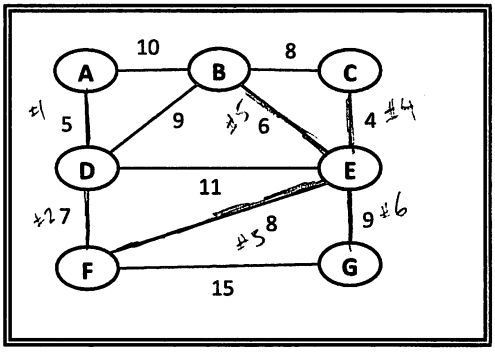
1. [6 pts] Show the execution of Kruskal's algorithm on the following graph step-by-step. When there are two or more than two edges that have the same weight, always consider them in alphabetical order of the vertices, *i.e*, if edge (*A, B*) and (*B, E*) have the same weight, we will pick edge (*A, B*). (see Fig.23.4 on textbook pp.632 as one example). Draw the resulting MST and compute its weight.

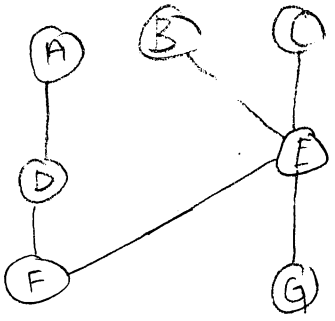




4+5+6+7+9 = 31

2. [6 pts] Show the execution of Prim's algorithm on the following graph step-by-step, assume the source vertex is *A*. When there are two or more than two edges that have the same weight, always consider them in alphabetical order of the vertices, *i.e*, if edge (*A, B*) and (*A, C*) have the same weight, we will pick edge (*A, B*). (see Fig.23.5 on textbook pp.635 as one example). Draw the resulting MST and compute its weight.



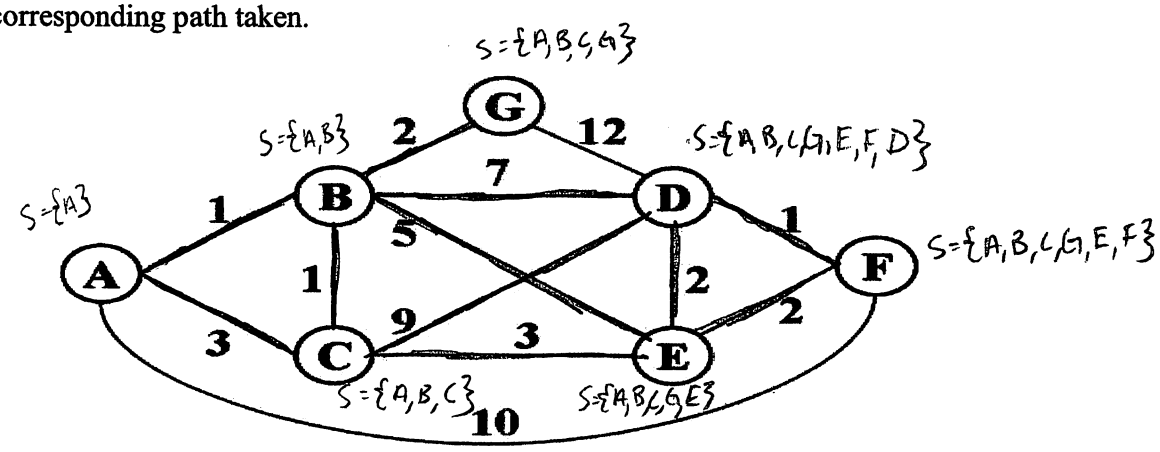


5+7+8+4+6+9=39

3.[10 pts] Step through Dijkstra's algorithm to calculate the order in which the vertices are visited from vertex A to all other vertices in the undirected graph given below. Then to calculate:

A) the shortest path distance from A to all other vertex and

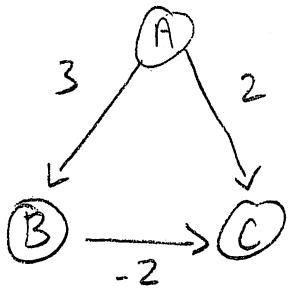
B) the corresponding path taken.



A) 1+1+2+3+2+1 = 10

B) S: {A,B,C,G,E,F,D}

4. [2 pts] Show an example to demonstrate that Dijkstra doesn't work with negative edge weights.



Starting Vertex is A going to C. By Dijkstras algorithm you would say the shortest path from A to C is 2, but it isn't the case. Dijstra doesn't account for negatives, the correct shortest path is 1.

5. [6 pts] Given the following two sequences X and Y, fill in the table to compute the LCS-Length on X and Y. Also follow the arrows from the lower right corner to get the elements of the LCS.

X = {A, G, A, C, T, G, T, C}

Y = {T, A, G, T, C, A, C, G}

	j	0	1	2	3	4	5	6	7	8
i		y_j	T	A	G	T	C	A	C	G
0	x_i	0	0	0	0	0	0	0	0	0
1	A	0	$0^{\uparrow}$	$1^{\nwarrow}$	$1^{\leftarrow}$	$1^{\leftarrow}$	$1^{\leftarrow}$	$1^{\nwarrow}$	$1^{\leftarrow}$	$1^{\leftarrow}$
2	G	0	$0^{\uparrow}$	$1^{\uparrow}$	$2^{\nwarrow}$	$2^{\leftarrow}$	$2^{\leftarrow}$	$2^{\leftarrow}$	$2^{\leftarrow}$	$2^{\nwarrow}$
3	A	0	$0^{\uparrow}$	$1^{\nwarrow}$	$2^{\uparrow}$	$2^{\leftarrow}$	$2^{\leftarrow}$	$3^{\nwarrow}$	$3^{\leftarrow}$	$3^{\leftarrow}$
4	C	0	$0^{\uparrow}$	$1^{\uparrow}$	$2^{\uparrow}$	$2^{\leftarrow}$	$3^{\nwarrow}$	$3^{\leftarrow}$	$4^{\nwarrow}$	$4^{\leftarrow}$
5	T	0	$1^{\nwarrow}$	$1^{\uparrow}$	$2^{\uparrow}$	$3^{\nwarrow}$	$3^{\leftarrow}$	$3^{\leftarrow}$	$4^{\uparrow}$	$4^{\uparrow}$
6	G	0	$1^{\uparrow}$	$1^{\uparrow}$	$2^{\nwarrow}$	$3^{\uparrow}$	$3^{\leftarrow}$	$3^{\leftarrow}$	$4^{\uparrow}$	$5^{\nwarrow}$
7	T	0	$1^{\nwarrow}$	$1^{\uparrow}$	$2^{\uparrow}$	$3^{\nwarrow}$	$3^{\leftarrow}$	$3^{\leftarrow}$	$4^{\uparrow}$	$5^{\uparrow}$
8	C	0	$1^{\uparrow}$	$1^{\uparrow}$	$2^{\uparrow}$	$3^{\uparrow}$	$4^{\uparrow}$	$4^{\leftarrow}$	$4^{\nwarrow}$	$5^{\uparrow}$

LCS of X and Y is: { A, G, A, C, G }
